It currently consists of 18 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                        .......... Genome Center

                                                                                                                                                                                                                                                                       morphogenetic protein-1 (BMP-1), vascular endothelial growth factor (VEGE-E) and platelet derived growth factor (PDGF). Polypeptides and platelet derived growth factor (PDGF): Polypeptides and platelet derived growth factor (PDGF): Polypeptides and platelet derived growth of platelet derived growth of platelet derived growth of platelet derived growth of a cell or a tissue, e.g. hyperplasia or neoplasia. The peptides and their associated nucleic acids are useful for treating processing, or aberrant physiological interactions of the proteins in a mammal, where the disorder is characterised by insufficient or ineffective growth of a cell or a tissue, e.g. hyperplasia or neoplasia. The peptides and their associated nucleic acids are useful for both promoting and inhibiting growth of cells and tissues and in treatment of cancer, anaemia, leukopenia, baldness, for treating cardiovascular and fibrotic disorders, dispenders, disorders, obesity, infectious diseases, hyperproliferative and dysproliferative disorders, cardiovascular and disorders such as haemophilia, and neural disorders including Parkinson's disease, amyotrophic lateral sclerosis, peripheral converses, mayotrophic lateral sclerosis, peripheral

Polypeptides and platelet derived growth factor (PDGF) Polypeptides and platelet derived growth of the proteins are useful for treating or preventing a disorder associated with aberrant expression, aberrant processing, or aberrant physiological interactions of the proteins in a mammal, where the disorder is characterised by insufficient or ineffective growth of a cell or a tissue, e.g. hyperplasia or neoplasia. The peptides and their associated nucleic acids are useful for both promoting and inhibiting growth of cells and tissues and in treatment of cancer, anaemia, leukopenia, baldness, for treating cardiovascular and clarotic disorders, disprelificative and dysproliferative disorders, neurodegenerative disorders, considers, obseity, infectious diseases, disorders, considers, obseity, infectious diseases, disorders, considers, obseity, infectious diseases, disorders, considers, con

Critic peptides and nucleic acids. FCTRX proteins are useful for treating or preventing a disorder associated with aberrant expression, aberrant processing, or aberrant physiological interactions of the proteins in a mammal, where the disorder is characterised by insufficient or ineffective growth of a cell or a tissue, e.g. hyperplasia or neoplasia. The peptides and their associated nucleic acids are useful for both promoting and inhibiting growth of cells and tissues and in treatment of cancer, anaemia, leukopenia, baldness, for treating cardiovascular and cancer, anaemia, leukopenia, baldness, for treating cardiovascular and cancer, anaemia, leukopenic ulcers, obesity, infectious diseases, hyperproliferative and dysproliferative disorders, neurodegenerative disorders, osteoarthritis, inflammatory disorders, farft versus host disease, coaqulation disorders such as haemophilia, and neural disorders including parkinson's disease, Alzheimer's disease, multiple sclerosis, neuropathy, acute brain injury and epilepsy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1699

The present sequence is the 5' truncated partial cDNA #2, encoding human platelet derived growth factor (PDGF)-D, formally known as Vascular Endothellal Growth Factor (VEGF)-G. It is derived from human foctal lung lambdagtid cDNA library. It belongs to the VEGF/PDGF family. It functions as an activator of proliferation, differentiation, growth and motility of cells, that express PDGF-D receptor. This sequence is useful for inhibiting the growth of tumours, that express PDGF-D. Expression of PDGF-D and its proteolytic cleavage for generating an activated truncated form is useful for regulating receptor binding specificity of PDGF-D. PDGF-D antagonist is useful for inhibiting tissue remodelling during the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                growth factor (PDGF)-D, formally known as Vascular Endothelial Growth Factor (VEGF)-G. It is derived from human foetal lung lambda g110 cDNA library. It belongs to the VEGF/PDGF family. It functions as an activator of proliferation, differentiation, growth and motility of cells, that express PDGF-D receptor. This sequence is useful for inhibiting the growth of tumours, that express PDGF-D. Expression of PDGF-D and its proteolytic cleavage for generating an activated truncated form is useful for regulating receptor binding specificity of PDGF-D. PDGF-D antagonist is useful for inhibiting tissue remodalling during the invasion of tumour cells into normal cells. PDGF-D may be used to treat wounds, atherosclerosis, metastasis and migration of smooth muscle cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to LP85, an analogue of platelet-derived growth factor (PDGF) homologue. Sequences of the invention are useful for the manufacture of a medicament for treating musculoskeletal disorder (MSD) which include promoting bone growth, cartillage differentiation and function, wound healing, neuron growth, preventing cartillage degradation or neuronal degeneration. They are useful for treating bone fractures, osteoponals, arthritis, sarcopenia, periodontal disease, tissue atrophy, traumatised connective tissues, grafted connective tissues and/or transplanted organs, bone or muscale loss due to malignancy, endocrine disorders and immobility. They are also used for prophylactically increasing or manifolicy bone density in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          241 CTATATACACATAGACATGAATATTTCTGTGTGTGTTTGTGCATATATAACCTCAAAC 300

                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to LP85, an analogue of platelet-derived growth factor (PDGF) homologue. Sequences of the invention are useful for the manufacture of a medicament for treating musculoskeletal disorder (MSD) which include promoting bone growth, cartilage differentiation and function, wound healing, neuron growth, preventing cartilage degradation or neuronal degeneration. They are useful for treating bone fractures, osteopenia, arthitis, sarcopenia, periodontal disease, tissues and/or transplanted organs, bone or muscle loss due to malignancy, endocrine disorders and immobility. They are also used for prophylactically increasing or maintaining bone density in a mammal. The present sequence is a DNA encoding human LP85 protein.

The invention provides novel human secreted proteins and polynucleotides encoding them. The secreted proteins can be expressed by standard encoding them. The secreted proteins and polynucleotides are recombinant methodology. The secreted proteins and polynucleotides are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They can also be used in diagnostic lambined condition. The antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme treated include autoimmune diseases e.g. radioimmunoassays or enzyme treated include autoimmune diseases e.g. rheumatoid arthritis, treated include autoimmune diseases e.g. rheumatoid arthritis, cardiodarscular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, or usus a lifection are objection. The polypeptides can also be used at o aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to mainfain organs before transplantation, chemotaxia. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. The present sequence represents a human secreted protein encoding CDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1880
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1820

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention provides novel human secreted proteins and polynucleotides encoding them. The secreted proteins can be expressed by standard recombinant methodology. The secreted proteins and polynucleotides are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They can also be used in alleviating a pathological condition. The antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunosorbent assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. cardioassis of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardioassystem disorders e.g. alzheinmer's disease, infections caused by bacteria, viruses and fungi and cular disorders e.g. corneal infection. The polypeptides can also be used to ald wound healing and epithelial cell proliferation, to prevent

The invention provides novel human secreted proteins and polynucleotides cenceding them. The secreted proteins can be expressed by standard recombinant methodology. The secreted proteins and polynucleotides are recombinant methodology. The secreted proteins and polynucleotides are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They can also be used in adjanced condition. The antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme three immunosorbent assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, viruses and fungi and coll sischemia, angiogenesis, nervous system disorders e.g. (as disorders e.g. corneal infection. The polypeptides can also be used at disorders e.g. corneal infection. The polypeptides can also be used as a food additive or chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. The present cerebresents a human secreted protein encoding CDNA.
                                                                                                                                                                                                                                                                                    17 isolated nucleic acid molecules encoding human secreted proteins, used to preventing, treating or ameliorating a medical condition

VEGF-G protein and nucleic acid melecules are used as medulating agents or as targets for developing modulating agents to regulate a variety of callular processes e.g. cell proliferation, differentiation, migration and wound repair. VEGF-G modulators, 1.e. VEGF-G protein, peptide, peptidommetic or nucleic acid are used to treat a subject with aberrant VEGF-G protein or nucleic acid expression or activity e.g. deregulated cell growth, such as cancer, hyperptrophic bone disorders involving aberrant anglogenesis e.g. psoriasis, and chronic inflammatory diseases e.g. rheumatoid arthritis. VEGF-G gene expression is inhibited through the administration of antisense 2; Gaps DB 22; Length 3853; Indels Sequence 3853 BP; 1194 A; 771 C; 757 G; 1131 T; 0 other; Vascular endothelial growth factor; VEGF; cancer; cell; molecules or ribozymes and by targeting the regulator to prevent transcription of the gene in target cells. CC (AAB48653), and nucleic acids encoding it (AAC81555). Zvegf4 is a member of the PDGF (platelet-derived growth factor)/VEGF (vascular endothellal cry growth factor) family. Zvegf4 has a growth factor domain (AAB48654)

CC characterised by a PDGF cystine knot structure, and a CUB domain (CAB48655) which has a beta barrel structure. Zvegf4 has PDGF-like activity, having mitogenic activity on fibroblasts, vascular smooth muscle cells and pericytes, and has also been shown to stimulate bone growth. The invention also relates to fusion proteins comprising human cyceff4 or fragments thereof, particularly human zvegf4/human zvegf4 an antibody nucleic acids; the recombinant expression of human zvegf4 is an antibody conclinate bunds to human zvegf4 or mucleic acids; the recombinant expression of human zvegf4 and antibody conclinate bunds to human zvegf4 or a fragment thereof; a method of activating a cell-surface PDGF receptor using a zvegf4-derived polypeptide; a cell-surface PDGF receptor using a zvegf4-derived polypeptide; a cell-surface PDGF receptor using a zvegf4-derived polypeptide; and method of detecting a genetic compatibilism of bone cells, comprising exposing bone cells to compain the zvegf4 gene of a patient. Zvegf4 proteins and derived abnormality in the zvegf4 gene of a patient. Zvegf4 proteins and derived cabnormality in the zvegf4 gene of a patient. They are particularly used for fingments may be used to stimulate tissue development or repair of liver damage, and may also be used to callular differentiation or proliferation. They are particularly used conditing sclerosis). Due to their osteogenic activity, they may also be used to conditing expension and mobilisation of hematopoletic stem cells and endothelial precursor stem cells, which may be used to remanne of ischaemia, in wound healing, and in the modulation of the reatment of ischaemia, in wound healing, and in the medulation of the reatment of ischaemia, in wound healing, and in the medulation of the reatment of ischaemia, in he reserved sequen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CTAAAGACATGTTTCATATTTGACCATCCCTTATTTTGGCAAAGGATTTTAAGAGTCT 1687

Polypeptides comprising an epitope-bearing portion human or murine 2VEGF3 (vascular endothelial growth factor homologue) are claimed. The growth factors comprise a growth factor domain and a CUB domain (generic sequence motifs are shown in AAVS6659 and AAVS6660). The growth factor domain is characterized by an arrangement of cysteine residues and beta-strands that is characteristic of the "cysteine knot" structure of the platelet-derived growth factor (PDGF) family. The CUB domain shows homology to CUB domains in neuropilins, human bone morphogenetic protein and Xenopus laevis tolloid-like protein. Structural analysis and homology predict that zvegF3 polypeptides complex with a second homology predict that zvegF3 polypeptides complex with a second consumption of fibroblasts or smooth muscles cells, for activating the growth of fibroblasts or smooth muscles cells, for activating cell surface continual and for simulating the growth continual process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          maintenance and repair processes. ZVEGET3 antagonists are useful for treating cancer, rheumatoid arthritis, diabetic retinopathy, ischemic limb disease, peripheral vascular disease, myocardial ischemia, vascular intimal hyperplasia, atherosclerosis, wound healing, chronic liver disease and haemangloma formation. ZVEGF3 can also be used to modulate neurite growth and development of the nervous system, and for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel zvegf3 polypeptides and nucleotides encoding them useful for stimulating growth of smooth muscle cells and fibroblasts comprising an epitope bearing portion of a specific amino acid sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cellular processes. ZVEGF3 is useful for regulating (post-development) organ growth, regeneration and maintenance, as well as tissue

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a method for reducing proliferation of or extracellular matrix production by a cell in a mammal. The method comprises administering to the mammal a composition comprising a therapeutically effective amount of a zvegf4 antagonist chosen from anti-zvegf4 antibodies, inhibitory polynucleotides, inhibitors of zvegf4 activation, and mitogenically inactive, receptor-binding variants of zvegf4. Zvegf4 (also called PDGF-1) is a multi-domain protein that is structurally related to platelet derived growth factor (PDGF) and vascular endothelial growth factors (VEGF). Zvegf4 has cytostatic, nephrotropic, hepatotropic, antiinflammatory, osteopathic and entitied activities. The method is useful for reducing proliferation of mesangial, epithelial, endothelial, smooth muscle, fibroblast,

                                                                                                                                                                                                                                                                                                   Intention relates to the use of every properties to the information relates to the use of every properties to the information of differentiation of osteoblasts, osteoclasts, chondrocytes or bone marrow stem cells in culture. For promoting cartilage growth, chondrocytes are cultured ex vivo in presence of the zvegf4 polypeptide and then placed into mammal where cartilage is to be grown. Zvegf4 polypeptide is useful for promoting growth of bone, cartilage in a mammal at a site of bony defect such as fracture, bone graft, implant or periodontal pocket, in humans and non-thum animals such as domestic animals including livestock and companion animals. Zvegf4 is used for promoting growth of bone, ligament, or cartilage in conditions of bone defects following therapeutic treatments or decreased bone formation, or elevation of pask bone mass in premenopausal woman. It is also useful for healing bone following radiation conduction of bone healing in plastic surgery, increasing bone formation of pask of promotion of bone healing in plastic surgery, increasing bone formation of premenopausal and increasing bone including repair of contraction osteogenesis, treating bone injuries including repair.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1747

in a mammal, in particular proliferation of prostate tumour cells, and for reducing extracellular matrix production by a cell in a mammal suffering from a fibroproliferative disorder of kidney, bone or liver. In particular it is useful for reducing stellate cell activation. The method is useful for reducing metastasis of prostate cancer cells to bone in a mammal and for treating a fibroproliferative disorder of kidney, liver or bone in a mammal. Fibroproliferative disorders of the kidney include, glomerulonephritis, diabetic glomerulosclerosis, lupus nephritis, renal arteriosclerosis and nephrotic syndrome, disorders of cirrhosis, and disorders of cirrhosis, and disorders of cirrhosis, and disorders of cirrhosis, osteoarthritis, and ectopic bone formation in metastatic prostate cancer. The present sequence encodes human zvegf4, which is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 1. Application US/09540224

Patent No. 106540543

GENERAL INCOMMATION:
APPLICANT: Glibertson, Debra G.
APPLICANT: Hart, Charles E.
TITLE OF INVENTION: METHODS FOR PROMOTING GROWTH OF BONE,
TITLE OF INVENTION: LIGAMENT AND CARTILAGE USING ZVEGF4
FILE REFERENCE: 00-28
CURRENT APPLICATION NUMBER: US/09/540,224
CURRENT APPLICATION NUMBER: US/09/540,169
EARLIER FILING DATE: 2000-03-31
EARLIER FILING DATE: 2000-02-04
NUMBER OF SEQ ID NOS: 9
SOFTWARE: FastSEQ for Windows Version:3.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Score 482.8; DB 4;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 36, Requence 3, Applementer 3, Applementer 13, Requence 14, R

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 902,
